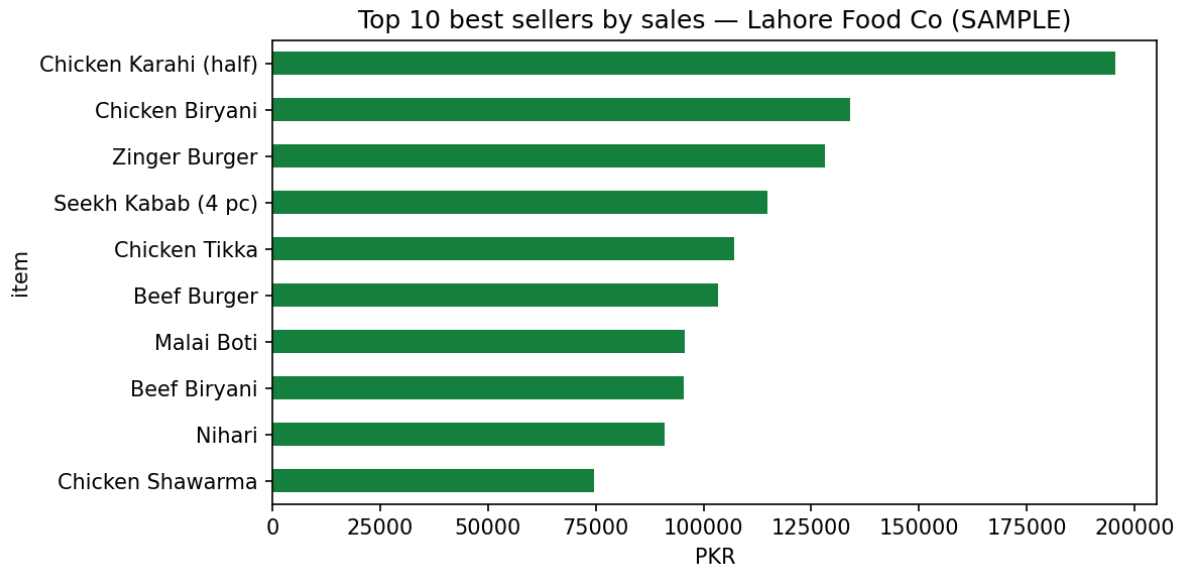
10	Chicken Shawarma	Fast Food	249	184	74,700

Sales by category

Category	Sales (PKR)	Share
BBQ & Grill	389,280	24.5%
Desi Curries	350,620	22.0%
Fast Food	346,930	21.8%
Biryani	309,610	19.5%
Beverages	110,150	6.9%
Desserts	84,530	5.3%



Peak hours & delivery

Lunch (13:00–15:00) carries 30.6% of orders and dinner (19:00–22:00) 33.1%. Slowest area is Johar Town (39.3 min average) against Gulberg (26.8 min) — the same kitchen, so the gap is distance and traffic, not cooking time.

5 actions, in priority order

1. Put Chicken Karahi, Chicken Biryani and Zinger Burger at the top of the app menu — together they are the first three sellers and the cheapest marketing is showing what already sells.

2. Bundle the slow movers: Desserts are only 5.3% of food sales — add a PKR 150 dessert to Karahi and Biryani combos instead of discounting the main dish.

3. Staff the 13:00–15:00 and 19:00–22:00 peaks first — two-thirds of orders land in those 7 hours; a rider shortfall there costs more than anywhere else.

4. Fix Johar Town delivery: longest average delivery and the slowest area by a clear margin — check rider allocation there before spending on ads in that area.

5. Push the App channel: it already carries most orders — move Phone orders (the smallest channel) onto the App with a first-App-order perk and cut manual order-taking.

Method: every number above is recomputed from data/raw/orders_SAMPLE.csv by this script (src/build_report.py). Delivery fee is PKR 80 per order, free on food orders of PKR 1,500 or more. Charts are preview renders of the same data, not Power BI screenshots — the Power BI build guide is in dashboard/powerbi-build-guide.md.
